PR Triage Framework

cirvannaco-png/Nakima

This is the triage framework only — no live PR data was available when this was generated. Fill prs.json (see docstring in pr_triage_report.py) with your 20 PRs and re-run to get the populated version.

MERGEABLE

CI green (or fixable in <30 min), no conflicts, still solves a real problem. Action: rebase and merge this week.

SUPERSEDED

A later PR or commit already does this, or the underlying issue is closed/moot. Action: close with a comment pointing to what replaced it.

STALE

No activity in 3+ weeks, has conflicts, or was a half-finished experiment. Action: close. Reopen later if genuinely needed — an open stale PR costs more (noise, false signal on repo health) than reopening costs.

BLOCKED

Real, wanted work that's blocked on a decision, a dependency, or your time. Action: pick at most 2-3 to actually finish this week. Defer or close the rest — an honest 'not now' beats an open PR pretending to be active.
